

Avalanche Forecasters and Rescuers Intersections

Mike Koppang

Association of Canadian Mountain Guides

Canadian Avalanche Association

Kananaskis Mountain Rescue Program

Models Differ Across Canada

Public Forecasting Agencies

- Avalanche Canada (*Not for profit*)
- Parks Canada - Government
- Kananaskis Region - Government
- Avalanche Quebec (*Not for Profit*)

Rescue Agencies

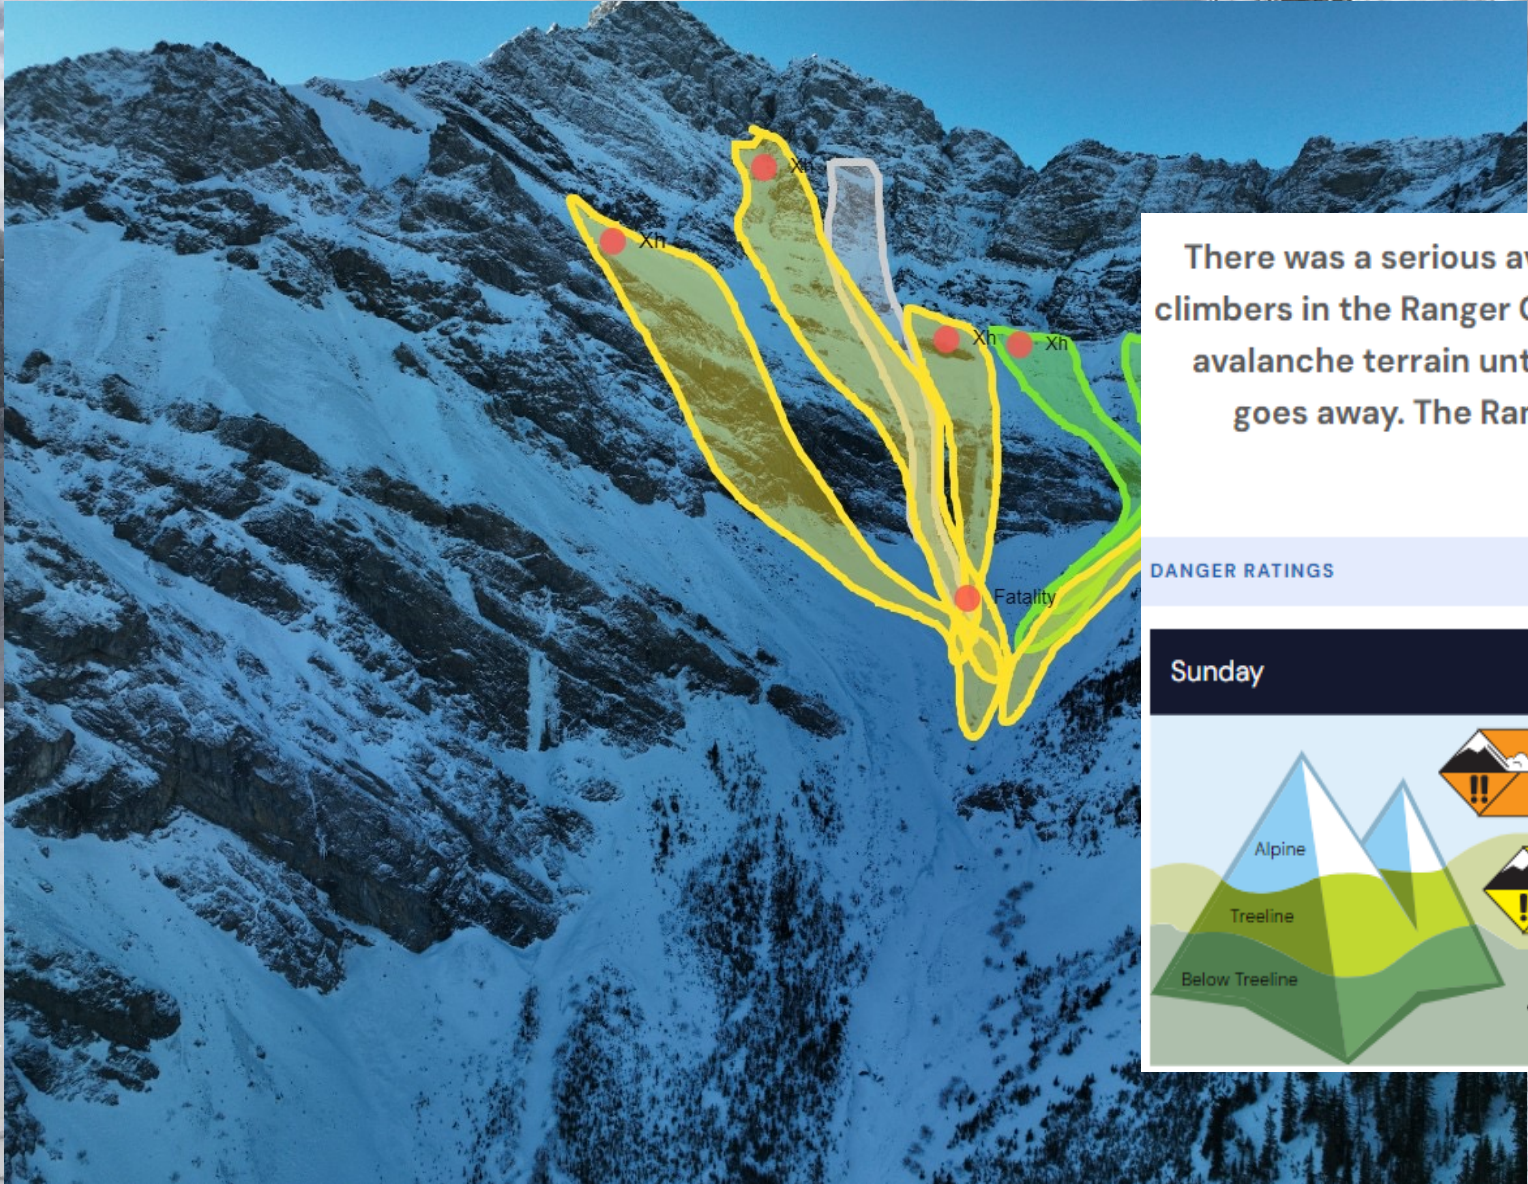

- RCMP/Local Police are the authority/tasking agency in most jurisdictions nationally
- Provinces primarily rely on Volunteers rescuers
- Parks Canada/Kananaskis Region Professional Agencies within there regions.

There was a serious avalanche incident today involving ice climbers in the Ranger Creek area. Avoid exposure to all alpine avalanche terrain until this wind induced avalanche cycle goes away. The Ranger Creek drainage will be closed tomorrow.

Confidence: Moderate

Used by Volunteer SAR teams as well as forecasters to inform decisions and/or Public Bulletins.

Content is vetted by a Canadian Avalanche Association Professional Member before submission.

A photograph of a person hiking on a steep, snow-covered mountain slope. The person is wearing dark clothing and is positioned in the middle ground. The slope is covered in snow with some small evergreen trees scattered across it. In the background, more snow-capped mountain peaks are visible under a clear blue sky. The overall scene is a high-altitude, winter mountain landscape.

Professional Teams are likely to have less uncertainty in the terrain based on frequency of visitations and number of field obs/data availability.

Volunteer teams may have higher uncertainty (team and individual specific) and rely partially on the forecast bulletin and field-based decisions on scene.

Relationships matter

A wide-angle photograph of a skier in a red jacket and black pants ascending a steep, snow-covered mountain slope. The skier is positioned in the lower-left quadrant of the frame, using two ski poles for balance. The mountain's surface is a mix of smooth snow and rocky outcrops. The sun is high in the sky, creating a strong lens flare and casting long shadows across the snow. The overall scene is bright and clear.

Thanks!
